

Late Payment Dunning and Collections Escalation Procedure

Nexus Communications · Billing

Document Name: Late Payment Dunning and Collections Escalation Procedure

Company: Nexus Communications

Company ID: nexuscomms

Department: Billing

Industry: telco

Version: 4.0

Audience: Billing operations and customer care agents

Privacy Level: Internal

Date of Creation: 2026-10-04

Date of Update: 2026-10-04

Format: PDF

Estimated Pages: 9

Training and Awareness

Billing maintains this standard on behalf of Nexus Communications to keep telco operations defensible. Each change request must be recorded in the operational register before it is presented to a customer. Metrics covering availability and error rate are published to stakeholders each quarter. Controls are mapped to the wider assurance framework to avoid duplicated effort. Escalation proceeds to the Process Manager when the P1 threshold is not restored in time. Where this document conflicts with legislation, the stricter requirement always prevails. The Process Manager may suspend the operational register entries without notice where risk warrants it.

Performance against the commitments in this document is reported to the Process Manager each quarter. Any deviation must be raised within one business day through the Late Payment Dunning and Collections Escalation intake channel. The Process Manager is accountable for confirming that this document is followed in practice. Where operational task cannot be completed as described, the fallback path is recorded in the control log. Customer-facing commitments made about operational task are traceable to a clause in the control log. Third parties are bound by these terms through contractual clauses in their statement of work. Exceptions require written approval from the Process Manager and are logged with a review date.

Risk Assessment

Systems that process Late Payment Dunning and Collections Escalation data must enforce encryption at rest and in transit. Clauses covering change request are reviewed by Billing before any renewal is negotiated. Evidence of compliance is retained for a minimum of seven years in the central records system. The standing target for backlog

age is agreed with the Process Manager and reported each quarter.

A operational task raised outside Billing is handed to the Process Manager rather than handled locally. New starters shadow an experienced owner until they can process a operational task unaided. Reconciliation of cost per unit is performed before the quarter reporting cycle is closed. Where operational task is urgent, the shortened route is used and logged for review afterwards.

Metric	Target	Escalation if missed
Availability	99.5%	Two consecutive quarter
Change lead time	Five business days	Any P1 change
Evidence completeness	100%	Any gap at audit
Training completion	100%	Before access grant

Standard Operating Procedure

Material changes to telco regulation are assessed for impact within quarter. Training is mandatory before production access is granted to the Late Payment Dunning and Collections Escalation environment. Applies to all staff, contractors and automated systems that support the Late Payment Dunning and Collections Escalation lifecycle. Capacity to absorb backlog age is reassessed every quarter and signed off by the Process Manager. Ownership rests with the Billing head, who may delegate day-to-day operation to a named owner. Corrections to backlog age are explained in the commentary that accompanies the process record. Every control described here is reviewed at least once per quarter by an independent reviewer.

The Process Manager reviews first-time-right rate alongside financial results to confirm the customer commitment assumptions hold. Evidence of testing is captured automatically and attached to the control record. Departments that consume first-time-right rate are notified before the figures are restated. Commercial terms relating to customer commitment may not be varied without written sign-off. Automated checks run continuously and alert the on-call engineer when thresholds are breached.

Stage	Trigger	Target
Detection	Automated alert or report	quarter review
Triage	Initial impact assessment	One business day
Containment	P1 impact confirmed	Immediate
Review	Service restored	Within quarter

Monitoring and Reporting

Failures exceeding the P1 impact threshold trigger a formal incident record. Disputes about change request are settled by reference to the process record and the recorded decision. Templates for change request are versioned centrally so that Billing does not maintain local copies. Changes to telco practice are evaluated by the Billing change advisory board. Data used to calculate backlog age is sourced from the monitoring stack and is not adjusted without approval.

Any correction to the process record is versioned, with the superseded version retained for audit. Business continuity plans assume the Late Payment Dunning and Collections Escalation capability can be restored within quarter. Access is granted on a least-privilege basis and recertified every quarter. Teams outside Billing consume the process record read-only; changes are requested through the Process Manager. Personnel joining Billing complete this training before receiving production credentials. Historical records remain queryable for audit purposes for the full retention window.

Records and Retention
