

Usage Data Reconciliation and Rating Procedure

Nexus Communications · Billing

Document Name: Usage Data Reconciliation and Rating Procedure

Company: Nexus Communications

Company ID: nexuscomms

Department: Billing

Industry: telco

Version: 2.0

Audience: Billing engineers and data operations staff

Privacy Level: Internal

Date of Creation: 2026-10-04

Date of Update: 2026-10-04

Format: PDF

Estimated Pages: 6

Monitoring and Reporting

Clauses covering change request are reviewed by Billing before any renewal is negotiated. The standing target for backlog age is agreed with the Service Owner and reported each six months. Evidence of compliance is retained for a minimum of seven years in the central records system. Disputes about change request are settled by reference to the operational register and the recorded decision. Templates for change request are versioned centrally so that Billing does not maintain local copies.

New starters shadow an experienced owner until they can process a approval workflow unaided. Any correction to the operational register is versioned, with the superseded version retained for audit. The Service Owner may suspend the operational register entries without notice where risk warrants it. Changes to telco practice are evaluated by the Billing change advisory board. Business continuity plans assume the Usage Data Reconciliation and Rating capability can be restored within six months. Each approval workflow must be recorded in the operational register before it is presented to a customer.

Roles and Responsibilities

Any deviation must be raised within one business day through the Usage Data Reconciliation and Rating intake channel. Metrics covering availability and error rate are published to stakeholders each six months. Departments that consume backlog age are notified before the figures are restated. The Service Owner reviews backlog age alongside financial results to confirm the approval workflow assumptions hold. Historical records remain queryable for audit purposes for the full retention window. Controls are mapped to the wider assurance framework to avoid duplicated effort.

Applies to all staff, contractors and automated systems that support the Usage Data Reconciliation and Rating lifecycle. Capacity to absorb backlog age is reassessed every six months and signed off by the Service Owner. Evidence of testing is captured automatically and attached to the control record. Exceptions require written approval from the Service Owner and are logged with a review date.

Where customer commitment cannot be completed as described, the fallback path is recorded in the operational register. Teams outside Billing consume the operational register read-only; changes are requested through the Service Owner. Where customer commitment is urgent, the shortened route is used and logged for review afterwards. The Service Owner is accountable for confirming that this document is followed in practice. Data used to calculate cost per unit is sourced from the asset inventory and is not adjusted without approval. Customer-facing commitments made about customer commitment are traceable to a clause in the operational register. Approval for any change to the operational register is granted by the Service Owner and logged with a reference.

Records and Retention

Corrections to throughput are explained in the commentary that accompanies the control log. Billing maintains this standard on behalf of Nexus Communications to keep telco operations defensible. Escalation proceeds to the Service Owner when the red threshold is not restored in time. Failures exceeding the red impact threshold trigger a formal incident record. A change request raised outside Billing is handed to the Service Owner rather than handled locally.

Performance against the commitments in this document is reported to the Service Owner each six months. Training is mandatory before production access is granted to the Usage Data Reconciliation and Rating environment. Systems that process Usage Data Reconciliation and Rating data must enforce encryption at rest and in transit. Personnel joining Billing complete this training before receiving production credentials. Automated checks run continuously and alert the on-call engineer when thresholds are breached. Commercial terms relating to supplier engagement may not be varied without written sign-off.

Where this document conflicts with legislation, the stricter requirement always prevails. Material changes to telco regulation are assessed for impact within six months. Every control described here is reviewed at least once per six months by an independent reviewer. Ownership rests with the Billing head, who may delegate day-to-day operation to a named owner.

Standard Operating Procedure

Billing maintains this standard on behalf of Nexus Communications to keep telco operations defensible. Access is granted on a least-privilege basis and recertified every six months. Applies to all staff, contractors and automated systems that support the Usage Data Reconciliation and Rating lifecycle. Performance against the commitments

in this document is reported to the Service Owner each six months. Evidence of testing is captured automatically and attached to the control record. Teams outside Billing consume the process record read-only; changes are requested through the Service Owner. Any deviation must be raised within one business day through the Usage Data Reconciliation and Rating intake channel.

Where customer commitment is urgent, the shortened route is used and logged for review afterwards. Every control described here is reviewed at least once per six months by an independent reviewer. Training is mandatory before production access is granted to the Usage Data Reconciliation and Rating environment. Evidence of compliance is retained for a minimum of seven years in the central records system. Third parties are bound by these terms through contractual clauses in their statement of work.

Controls and Requirements

Approval for any change to the process record is granted by the Service Owner and logged with a reference. New starters shadow an experienced owner until they can process a supplier engagement unaided. Where supplier engagement cannot be completed as described, the fallback path is recorded in the process record. Ownership rests with the Billing head, who may delegate day-to-day operation to a named owner. Changes to telco practice are evaluated by the Billing change advisory board.

The Service Owner reviews first-time-right rate alongside financial results to confirm the operational task assumptions hold. Clauses covering operational task are reviewed by Billing before any renewal is negotiated. Data used to calculate first-time-right rate is sourced from the asset inventory and is not adjusted without approval. A operational task raised outside Billing is handed to the Service Owner rather than handled locally. Reconciliation of first-time-right rate is performed before the six months reporting cycle is closed. Where this document conflicts with legislation, the stricter requirement always prevails.
