Audience: Enterprise sales teams and customer success managers

Privacy Level: Internal

Date of Creation: 2026-10-04

Date of Update: 2026-10-04

Format: PDF

Estimated Pages: 5

Standard Operating Procedure

Applies to all staff, contractors and automated systems that support the Account Management Playbook for Corporate and Government Telco Accounts lifecycle. Training is mandatory before production access is granted to the Account Management Playbook for Corporate and Government Telco Accounts environment. Data used to calculate first-time-right rate is sourced from the change management log and is not adjusted without approval. Controls are mapped to the wider assurance framework to avoid duplicated effort. The Process Manager may suspend the process record entries without notice where risk warrants it.

Commercial terms relating to service request may not be varied without written sign-off. Customer-facing commitments made about service request are traceable to a clause in the operational register. Where this document conflicts with legislation, the stricter requirement always prevails. Automated checks run continuously and alert the on-call engineer when thresholds are breached. Each service request must be recorded in the operational register before it is presented to a customer. The Process Manager is accountable for confirming that this document is followed in practice. Performance against the commitments in this document is reported to the Process Manager each six months.

Roles and Responsibilities

The standing target for cost per unit is agreed with the Process Manager and reported each six months. Where approval workflow cannot be completed as described, the fallback path is recorded in the operational register. Metrics covering availability and error rate are published to stakeholders each six months. Corrections to cost per unit are

explained in the commentary that accompanies the operational register. Where approval workflow is urgent, the shortened route is used and logged for review afterwards. Approval for any change to the operational register is granted by the Process Manager and logged with a reference.

Ownership rests with the Sales head, who may delegate day-to-day operation to a named owner. The Process Manager reviews first-time-right rate alongside financial results to confirm the approval workflow assumptions hold. Material changes to telco regulation are assessed for impact within six months. Exceptions require written approval from the Process Manager and are logged with a review date. Historical records remain queryable for audit purposes for the full retention window.

Evidence of testing is captured automatically and attached to the control record. Escalation proceeds to the Process Manager when the high threshold is not restored in time. Systems that process Account Management Playbook for Corporate and Government Telco Accounts data must enforce encryption at rest and in transit. Clauses covering operational task are reviewed by Sales before any renewal is negotiated.

Control	Owner	Frequency
Access recertification	Service Owner	Each six months
Change approval	Process Manager	Per change
Backup restore test	Control Owner	Each six months
Log retention review	Compliance Officer	Each six months

Supporting Notes

Capacity to absorb first-time-right rate is reassessed every six months and signed off by the Process Manager. Third parties are bound by these terms through contractual clauses in their statement of work. A operational task raised outside Sales is handed to the Process Manager rather than handled locally. New starters shadow an experienced owner until they can process a operational task unaided. Reconciliation of first-time-right rate is performed before the six months reporting cycle is closed.

Personnel joining Sales complete this training before receiving production credentials. Departments that consume cost per unit are notified before the figures are restated. Any deviation must be raised within one business day through the Account Management Playbook for Corporate and Government Telco Accounts intake channel. Changes to telco practice are evaluated by the Sales change advisory board. Business continuity plans assume the Account Management Playbook for Corporate and Government Telco Accounts capability can be restored within six months. Templates for supplier engagement are versioned centrally so that Sales does not maintain local copies.

Records and Retention

Access is granted on a least-privilege basis and recertified every six months. Evidence of compliance is retained for a minimum of seven years in the central records system. Failures exceeding the high impact threshold trigger a formal incident record. Sales maintains this standard on behalf of Nexus Communications to keep telco operations defensible. Every control described here is reviewed at least once per six months by an independent reviewer. Teams outside Sales consume the control log read-only; changes are requested through the Process Manager. Any correction to the control log is versioned, with the superseded version retained for audit.

Any correction to the operational register is versioned, with the superseded version retained for audit. Disputes about customer commitment are settled by reference to the operational register and the recorded decision. Escalation proceeds to the Process Manager when the high threshold is not restored in time. Where customer commitment is urgent, the shortened route is used and logged for review afterwards. Each customer commitment must be recorded in the operational register before it is presented to a customer. The Process Manager reviews first-time-right rate alongside financial results to confirm the customer commitment assumptions hold. The Process Manager is accountable for confirming that this document is followed in practice.
