Risk Assessment

Business continuity plans assume the Dispute and Credit Adjustment Approval capability can be restored within six months. Clauses covering customer commitment are reviewed by Billing before any renewal is negotiated. Automated checks run continuously and alert the on-call engineer when thresholds are breached. Escalation proceeds to the Process Manager when the red threshold is not restored in time. Third parties are bound by these terms through contractual clauses in their statement of work.

Any deviation must be raised within one business day through the Dispute and Credit Adjustment Approval intake channel. Customer-facing commitments made about operational task are traceable to a clause in the operational register. Any correction to the operational register is versioned, with the superseded version retained for audit. Corrections to throughput are explained in the commentary that accompanies the operational register. The Process Manager reviews throughput alongside financial results to confirm the operational task assumptions hold.

Departments that consume backlog age are notified before the figures are restated. Data used to calculate backlog age is sourced from the identity provider and is not adjusted without approval. Exceptions require written approval from the Process Manager and are logged with a review date. New starters shadow an experienced owner until they can process a approval workflow unaided. Historical records remain queryable for audit purposes for the full retention window. The Process Manager may suspend the operational register entries without notice where risk warrants it. Access is granted on a least-privilege basis and recertified every six months.

Standard Operating Procedure

Billing maintains this standard on behalf of Nexus Communications to keep telco operations defensible. Performance against the commitments in this document is reported to the Process Manager each six months. Failures exceeding the red impact threshold trigger a formal incident record. Every control described here is reviewed at least once per six months by an independent reviewer. Evidence of compliance is retained for a minimum of seven years in the central records system.

A service request raised outside Billing is handed to the Process Manager rather than handled locally. Personnel joining Billing complete this training before receiving production credentials. Evidence of testing is captured automatically and attached to the control record. Changes to telco practice are evaluated by the Billing change advisory board. Material changes to telco regulation are assessed for impact within six months. Controls are mapped to the wider assurance framework to avoid duplicated effort.

Where operational task cannot be completed as described, the fallback path is recorded in the operational register. Applies to all staff, contractors and automated systems that support the Dispute and Credit Adjustment Approval lifecycle. Capacity to absorb cost per unit is reassessed every six months and signed off by the Process Manager. Reconciliation of cost per unit is performed before the six months reporting cycle is closed. Systems that process Dispute and Credit Adjustment Approval data must enforce encryption at rest and in transit. Approval for any change to the operational register is granted by the Process Manager and logged with a reference. Teams outside Billing consume the operational register read-only; changes are requested through the Process Manager.

Metric	Target	Escalation if missed
Availability	99.5%	Two consecutive six months
Change lead time	Five business days	Any P1 change
Evidence completeness	100%	Any gap at audit
Training completion	100%	Before access grant

Roles and Responsibilities

The Process Manager is accountable for confirming that this document is followed in practice. Commercial terms relating to change request may not be varied without written sign-off. Each change request must be recorded in the operational register before it is presented to a customer. Ownership rests with the Billing head, who may delegate day-to-day operation to a named owner. Templates for change request are versioned centrally so that Billing does not maintain local copies.

Where approval workflow is urgent, the shortened route is used and logged for review afterwards. Where this document conflicts with legislation, the stricter requirement always prevails. Metrics covering availability and error rate are published to

stakeholders each six months. Disputes about approval workflow are settled by reference to the control log and the recorded decision. The standing target for throughput is agreed with the Process Manager and reported each six months. Training is mandatory before production access is granted to the Dispute and Credit Adjustment Approval environment.

Systems that process Dispute and Credit Adjustment Approval data must enforce encryption at rest and in transit. Evidence of testing is captured automatically and attached to the control record. Data used to calculate cost per unit is sourced from the identity provider and is not adjusted without approval. Ownership rests with the Billing head, who may delegate day-to-day operation to a named owner. Capacity to absorb cost per unit is reassessed every six months and signed off by the Process Manager.

Controls and Requirements

Review and Revision History

Where this document conflicts with legislation, the stricter requirement always prevails. Capacity to absorb backlog age is reassessed every six months and signed off by the Process Manager. Any correction to the process record is versioned, with the superseded version retained for audit. Applies to all staff, contractors and automated systems that support the Dispute and Credit Adjustment Approval lifecycle.

Data used to calculate first-time-right rate is sourced from the identity provider and is not adjusted without approval. Controls are mapped to the wider assurance framework to avoid duplicated effort. Any deviation must be raised within one business day through the Dispute and Credit Adjustment Approval intake channel. Customer-facing commitments made about supplier engagement are traceable to a clause in the operational register. Billing maintains this standard on behalf of Nexus Communications to keep telco operations defensible. Every control described here is reviewed at least once per six months by an independent reviewer.

Disputes about approval workflow are settled by reference to the process record and the recorded decision. New starters shadow an experienced owner until they can process a approval workflow unaided. Clauses covering approval workflow are reviewed by Billing before any renewal is negotiated. Training is mandatory before production access is granted to the Dispute and Credit Adjustment Approval environment. A approval workflow raised outside Billing is handed to the Process Manager rather than handled locally.

Training and Awareness

Evidence of testing is captured automatically and attached to the control record. Commercial terms relating to change request may not be varied without written sign-off. Changes to telco practice are evaluated by the Billing change advisory board. The standing target for first-time-right rate is agreed with the Process Manager and reported each six months.

Approval for any change to the process record is granted by the Process Manager and logged with a reference. Performance against the commitments in this document is reported to the Process Manager each six months. Each change request must be recorded in the process record before it is presented to a customer. Evidence of compliance is retained for a minimum of seven years in the central records system. Where change request is urgent, the shortened route is used and logged for review afterwards. Where change request cannot be completed as described, the fallback path is recorded in the process record.

Scope and Applicability

Ownership rests with the Billing head, who may delegate day-to-day operation to a named owner. Exceptions require written approval from the Process Manager and are logged with a review date. Reconciliation of backlog age is performed before the six months

reporting cycle is closed. The Process Manager reviews backlog age alongside financial results to confirm the change request assumptions hold. Personnel joining Billing complete this training before receiving production credentials.

Material changes to telco regulation are assessed for impact within six months. Business continuity plans assume the Dispute and Credit Adjustment Approval capability can be restored within six months. Access is granted on a least-privilege basis and recertified every six months. Teams outside Billing consume the control log read-only; changes are requested through the Process Manager. Automated checks run continuously and alert the on-call engineer when thresholds are breached. Corrections to cost per unit are explained in the commentary that accompanies the control log.

Third parties are bound by these terms through contractual clauses in their statement of work. Systems that process Dispute and Credit Adjustment Approval data must enforce encryption at rest and in transit. Escalation proceeds to the Process Manager when the red threshold is not restored in time. Departments that consume backlog age are notified before the figures are restated. The Process Manager is accountable for confirming that this document is followed in practice.

Stage	Trigger	Target
Detection	Automated alert or report	six months review
Triage	Initial impact assessment	One business day
Containment	red impact confirmed	Immediate
Review	Service restored	Within six months

Monitoring and Reporting

Metrics covering availability and error rate are published to stakeholders each six months. Evidence of compliance is retained for a minimum of seven years in the central records system.
